

Biography

Dr. Chui is Professor and Director of the Wood Science and Technology Centre, University of New Brunswick. In this capacity, he directs an operation that provides innovation support and testing service to the wood and building industry in Atlantic Canada. Concurrently, Dr. Chui holds the position of Scientific Director of an NSERC Strategic Research Network, NEWBuildS, which consists of 23 researchers from 13 Canadian universities. Dr. Chui's expertise is in structural performance of wood building systems and engineered wood products. He has close to 30 years of research experience and published over 150 articles in refereed journals and conference proceedings in these disciplines. Dr. Chui is actively engaged in building code and design standard development in North America and at the international level. He is currently member of a Standing Committee of the National Building Code of Canada, and a number of Canadian and international technical committees on design of wood structures and engineered wood products.
