in conjunction with the 61st annual Atlantic
Building Materials Show*

Seminar Agenda:

Sustainable building design through Green Globes (promoting use of regional products)

David Stewart - Principle & Owner, David C. Stewart & Associates (Dartmouth, NS)

Wood design in 6 storey buildings

Kevin Below - Owner, Douglas Consultants (Quebec City, QC)

Fire ratings & fire performance of wood buildings.

Ben Coles - Fire protection engineer, RJ Bartlett Engineering Ltd. (Fredericton, NB)

For speaker bios and information, visit the Events and Education area of our website

www.atlanticwoodworks.ca

Opportunities in Mid-rise Construction:

The National Building Code of Canada (NBCC) is under review to allow the height restriction of light wood frame construction to be increased to 6 stories. This change poses the following opportunities to our region:

- More competitive developments - estimated cost savings of \$30 - \$40 per square foot of construction when compared to concrete and steel materials
- Increased availability of affordable housing
- 6-storey mid-rise residential buildings can be among the most economical structures for sustainable urban densification to prevent urban sprawl
- Increased tax base for municipalities
- Minimized carbon footprint of building construction
- Opportunity to partner with other building material industries to achieve optimal results

If you are an architect, civil or structural engineer, developer, building designer or contractor, construction technologist, municipal official, building and fire code official, student or professor, this is the one event you should not miss.

French Translation is Available:

If you require simultaneous translation, please register for this service on our website before **January 19th**.
